Imaging SA

Harley Skorpenske,  
SNS Group Leader

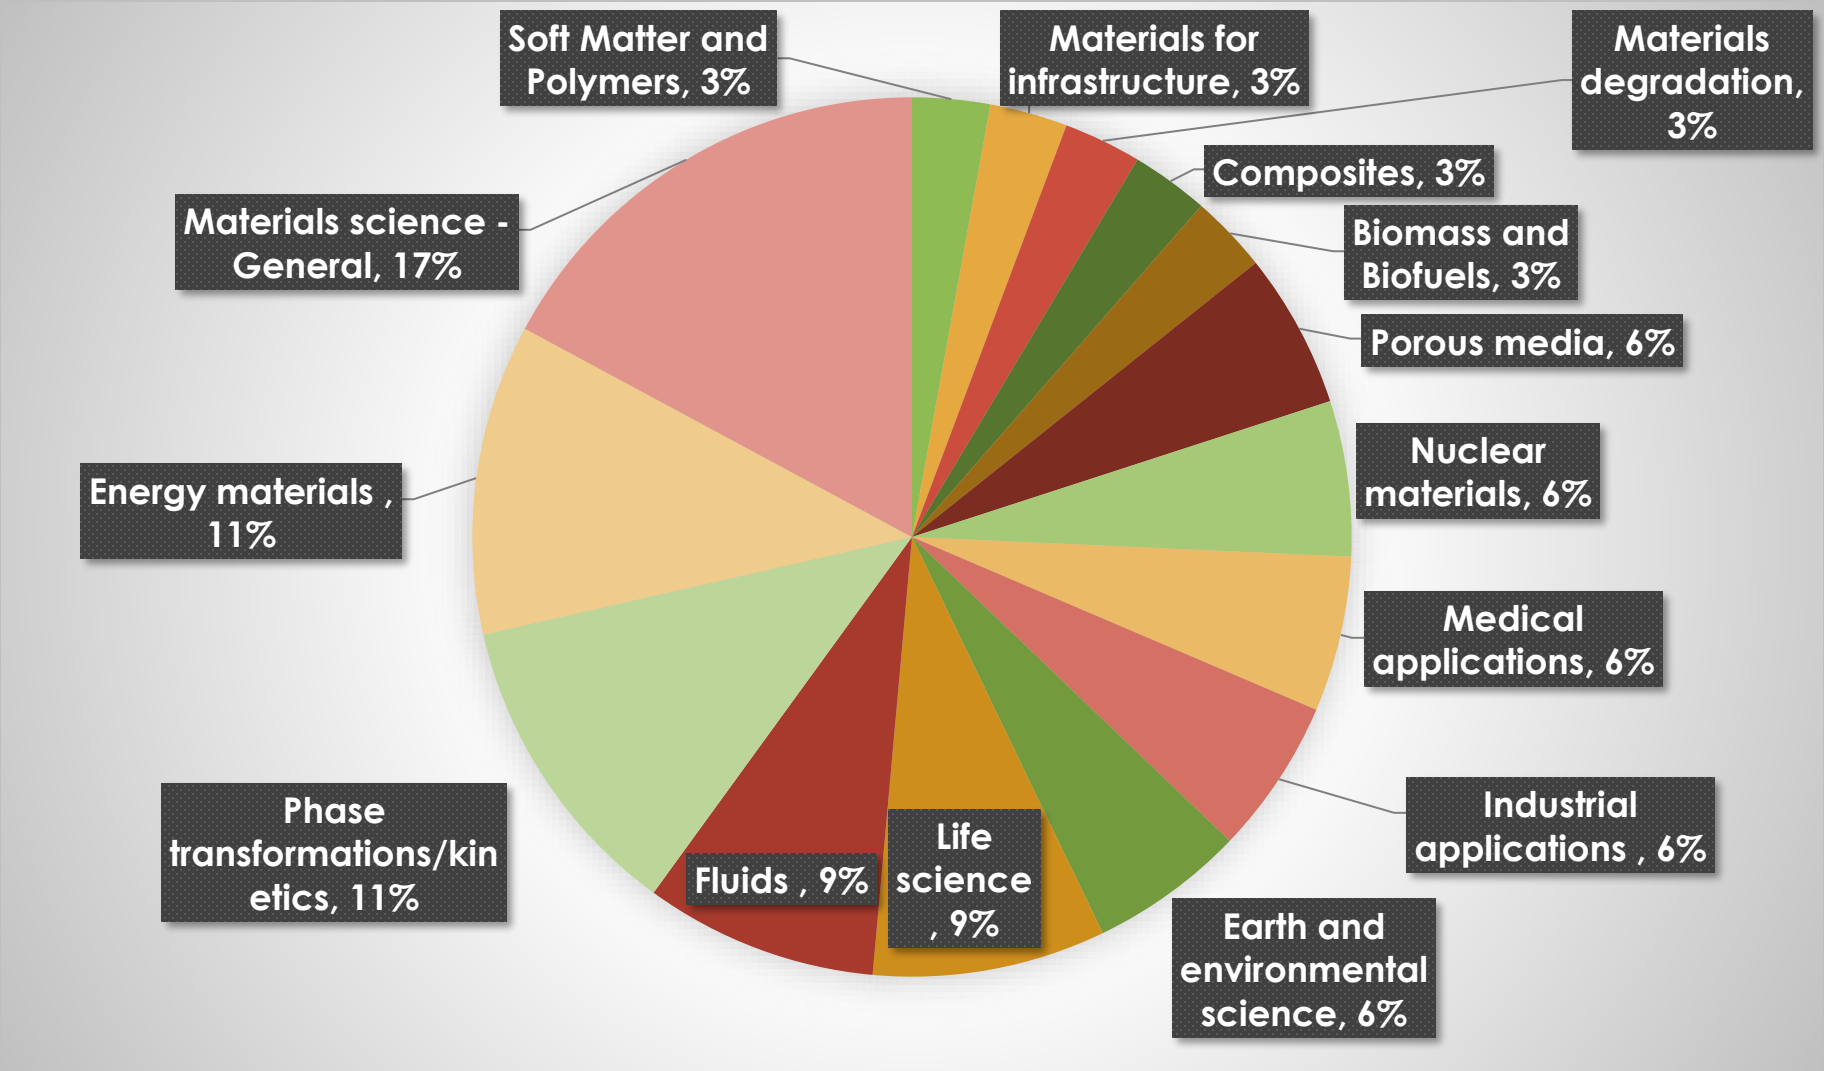

Jamie Molaison,  
SNS SNAP SA

Hassina Bilheux,  
SNS VENUS Scientist

# Imaging has a broad scientific portfolio

# Imaging is a Growing Part of the ORNL Neutron Sciences Program

## High Flux Isotope Reactor (HFIR)

Intense steady-state neutron flux and a high-brightness cold neutron source

Dedicated Imaging Instrument (CG-1D)  
Steadily improving capabilities  
Expanded support

## Spallation Neutron Source (SNS)

World's most powerful accelerator-based neutron source

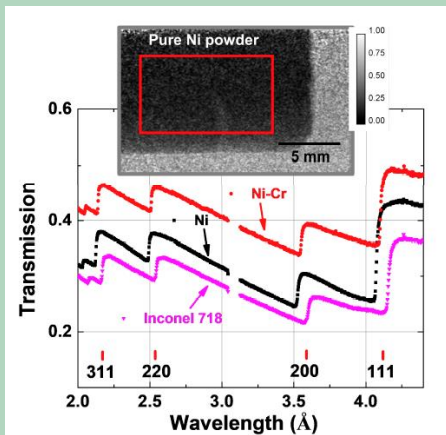

Techniques such as Bragg-edge imaging are being implemented on BL3 SNAP diffractometer (VENUS is under construction)

Future CUIP<sup>2</sup>D beamline at STS (Bragg edge and grating interferometry)

## Bragg edge

Transmission spectra of pure Ni,  $\text{Ni}_{39}\text{Cr}_{11}$ , and Inconel 718 powders.

<200> Bragg edge strain map of additively manufactured Inconel 718 at 15, 200, 400 and 550 Mpa.

## Scattering

Radial average absolute differential macroscopic cross section vs. wavevector transfer in Zircaloy-4 cladding material

SANS raw data of microporous titanium carbide-derived carbon (TiC-CDC) at 800 C

## Grating Interferometry

Radiograph (top) and Dark field image (bottom) of 1-10  $\mu\text{m}$  layers of steel foil

4 cm x 4 cm x 1 cm thick Al foam (invisible unless measured with gratings)

## Microscopy

Radiograph of a membrane in a proton exchange membrane fuel cell (PEMFC) at a resolution of 1.98  $\mu\text{m}$

Vertical slice from a neutron microtomography dataset showing dendritic microstructures of lead, voids and gold in a sample of a gold-lead alloy

## Radiography, Computed Tomography and Resonance

Cut through computed tomogram showing internal flow channels in an additively manufactured Inconel 718 turbine blade

Transmission radiographs at different stages of lithiation during the discharge process. Yellow and green colors indicate an increase in Li ion content in each cathode

*Inferred structure (indirect)*

*Direct structure*

0.1 Å      1.0 nm      0.1  $\mu\text{m}$       1.0  $\mu\text{m}$       10.0  $\mu\text{m}$       10 cm

FTS VENUS (Bragg edge)

HFIR CG-1D/MARS (microscopy)

STS CUPID (combined Bragg edge and neutron grating interferometry)

FUTURE PROPOSAL HFIR MERCURY (high penetration/large samples)

STS VENUS (Resonance)

## Inferred structure (indirect)

## Direct structure

### VENUS (FTS thermal, cold)

*Phase transformation in crystalline materials such as advanced alloys and natural materials under stress, nuclear materials, energy materials*

2D: Tens of min to hrs

### VENUS (FTS epithermal)

*Heavy element detection: nuclear materials, geosciences*

2D: hrs

### MERCURY (HFIR epithermal)

*Difficult to penetrate materials: Life sciences and biology, large engineering materials (H-rich materials, thick and large objects), Nuclear materials, etc.*

2D: min

Future proposal

### CUPI<sup>2</sup>D (STS cold)

*Dynamics: Materials science (energy materials, alloys, etc.), biology, etc., under extremes conditions.*

2D: s to min

One of 8 selected STS instruments

### MARS (HFIR cold)

*Thin samples: Micro-defect detections and dynamic processes in engineered and natural materials, magnetic domain mapping, life sciences and biology*

2D: ms to min

Current CG-1D beamline moved to new position

Maximum field-of-view

30 cm x 30 cm

10 cm x 10 cm

1 Å

10 Å

0.5 μm

0.1 mm

0.5 mm

1.0 cm

Resolution sensitivity

# Neutrons interact uniquely with matter

- Non-destructive
- High penetration
- Sensitive to light elements (H, Li, etc.)
- Isotopic contrast

[M. Strobl et al., J. Phys. D: Appl. Phys. 42 (2009) 243001]

# From raw image to normalized image

=

$$I_N(i, j) = \frac{I(i, j) - DF(i, j)}{OB(i, j) - DF(i, j)}$$

## Lambert-Beer Law

Transmission  $T = \frac{I}{I_0} = e^{-\mu x}$

Sample thickness  $x$

Attenuation co.  $\mu$

Density  $\rho$

Avogadro constant  $N_A$

Molar mass  $M$

Total cross-section  $\sigma_{tot}$

$$\mu = \sigma_{tot} \frac{\rho N_A}{M}$$

# Principle of Bragg edge imaging (using cold neutrons)

- Spallation neutron sources discriminate neutron wavelength (or energy) by using the time-of-flight (TOF) technique

$$I(\lambda) = I_0(\lambda)e^{-\mu(\lambda)x} \quad \mu(\lambda) = \sigma_t(\lambda) \frac{\rho N_A}{M}$$

White-beam (or reactor-based) neutron radiograph:  
sums over all neutron wavelengths

One radiograph →

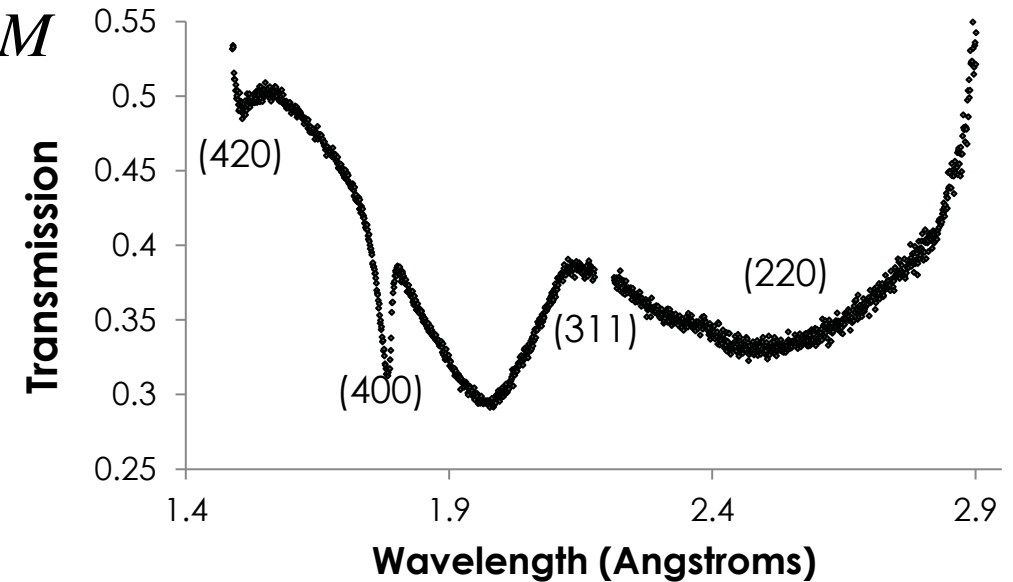

$t_1$  or  $\lambda_1$     $t_2$  or  $\lambda_2$     $t_n$  or  $\lambda_n$

Thousands of radiographs →

Wavelength-dependent (or TOF) neutron radiographs  
(**Discrete** neutron wavelengths)

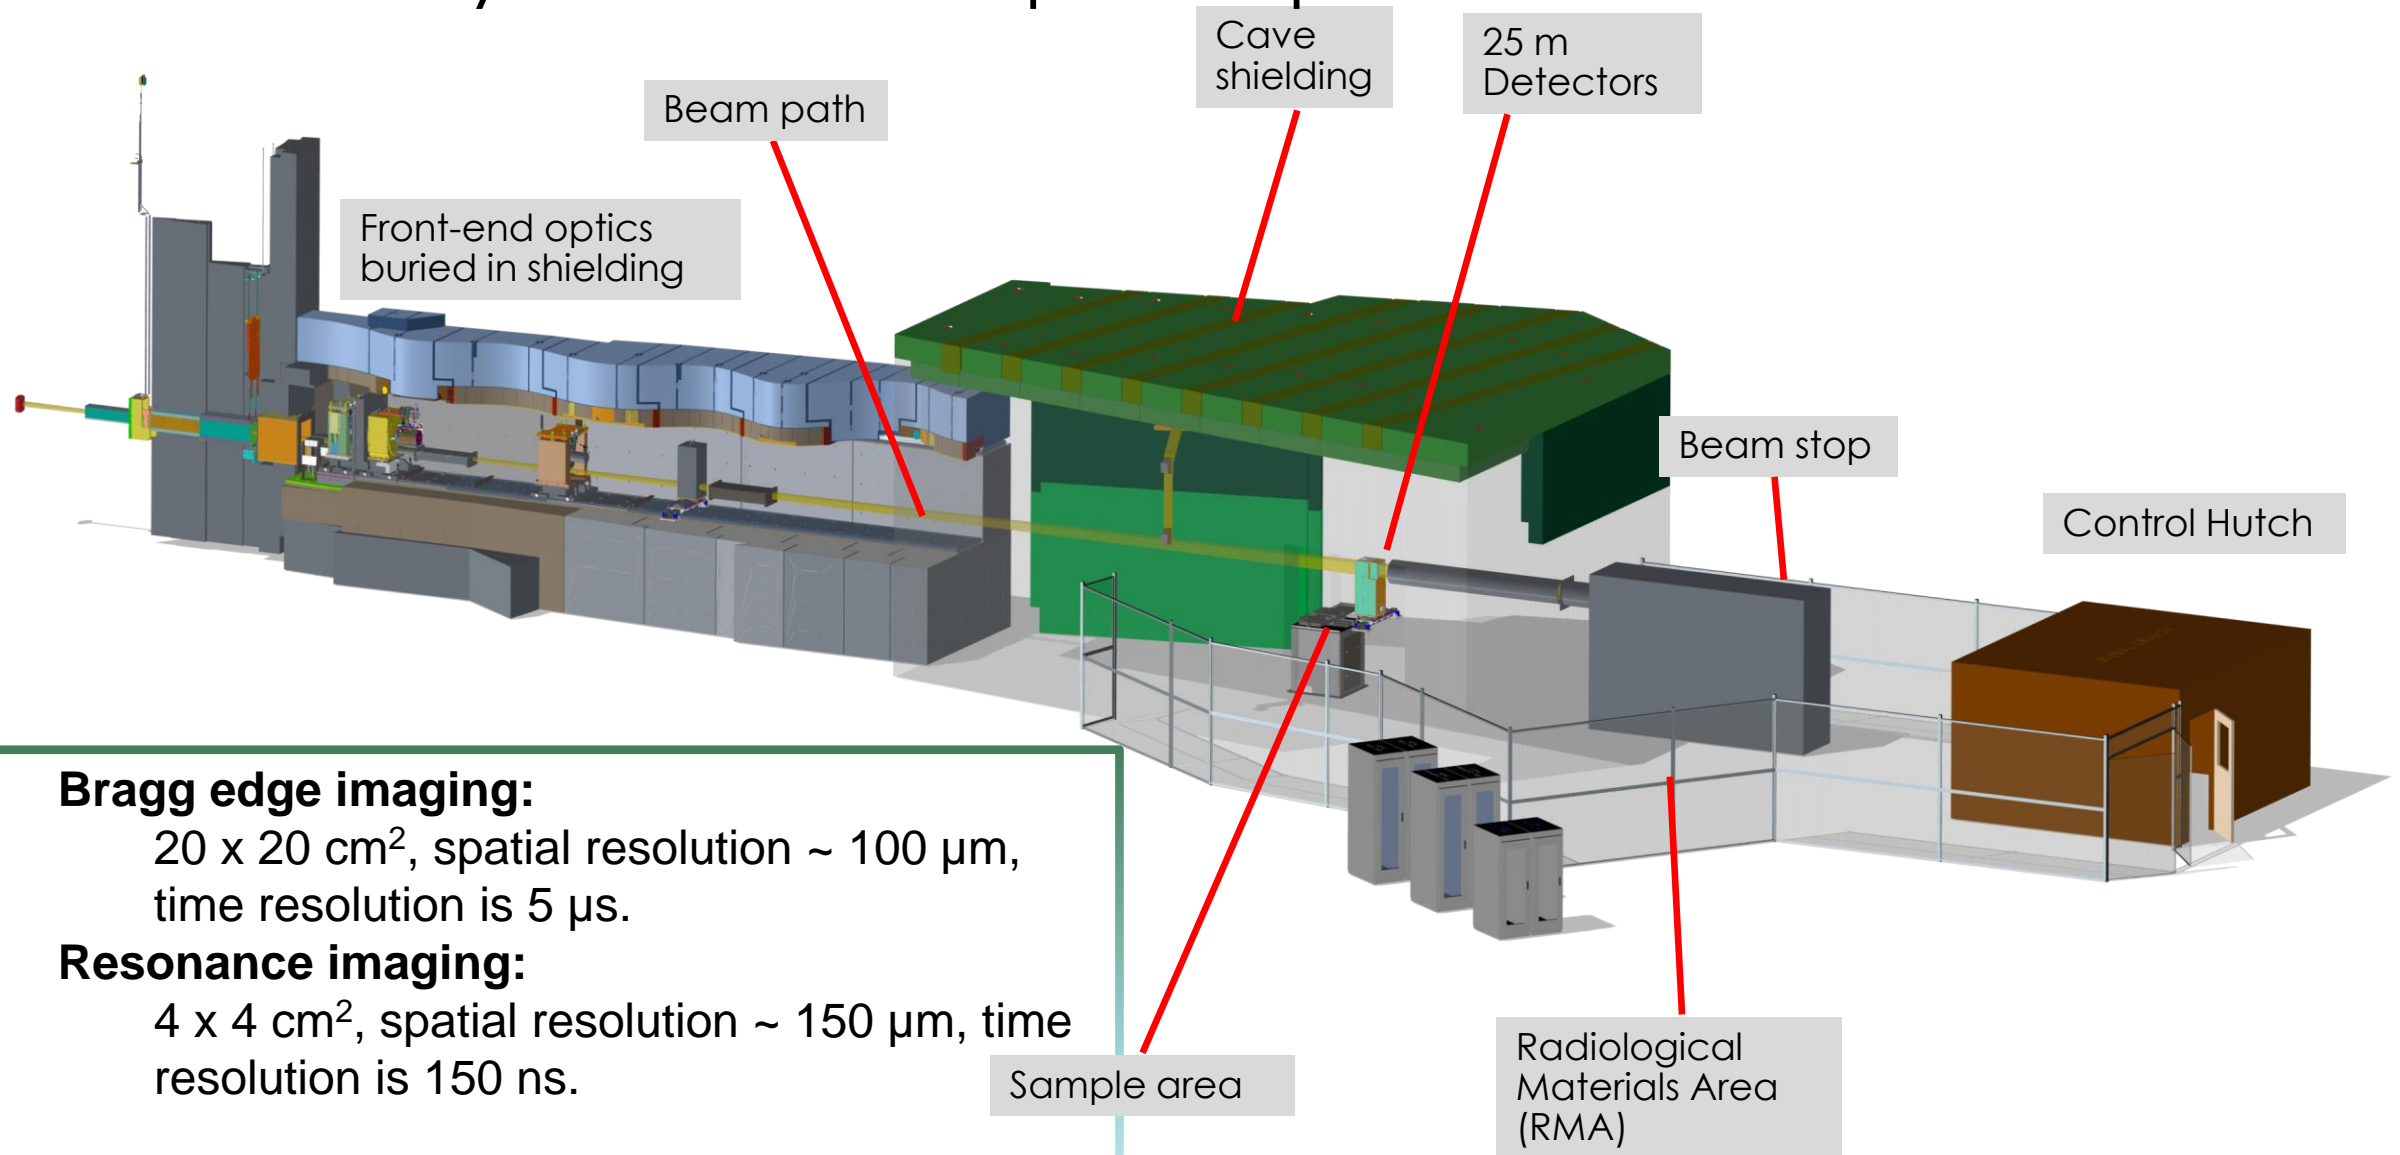

Wavelength range ~ [1-10 Å]

Position of the edge gives the d-spacing of  $\langle hkl \rangle$  or displacement gives the strain

Barton J.P., Bilheux H.Z., Bossi R., Herwig K.W., Santodonato L., Taylor M., "[Chapter 12: Neutron Radiography for Nondestructive Testing](#)", *Nondestructive Testing Handbook, Fourth Edition: Volume 3, Radiographic Testing (RT)* (2019).

# VENUS layout and unique capabilities

## **Bragg edge imaging:**

20 x 20 cm<sup>2</sup>, spatial resolution ~ 100 μm,  
time resolution is 5 μs.

## **Resonance imaging:**

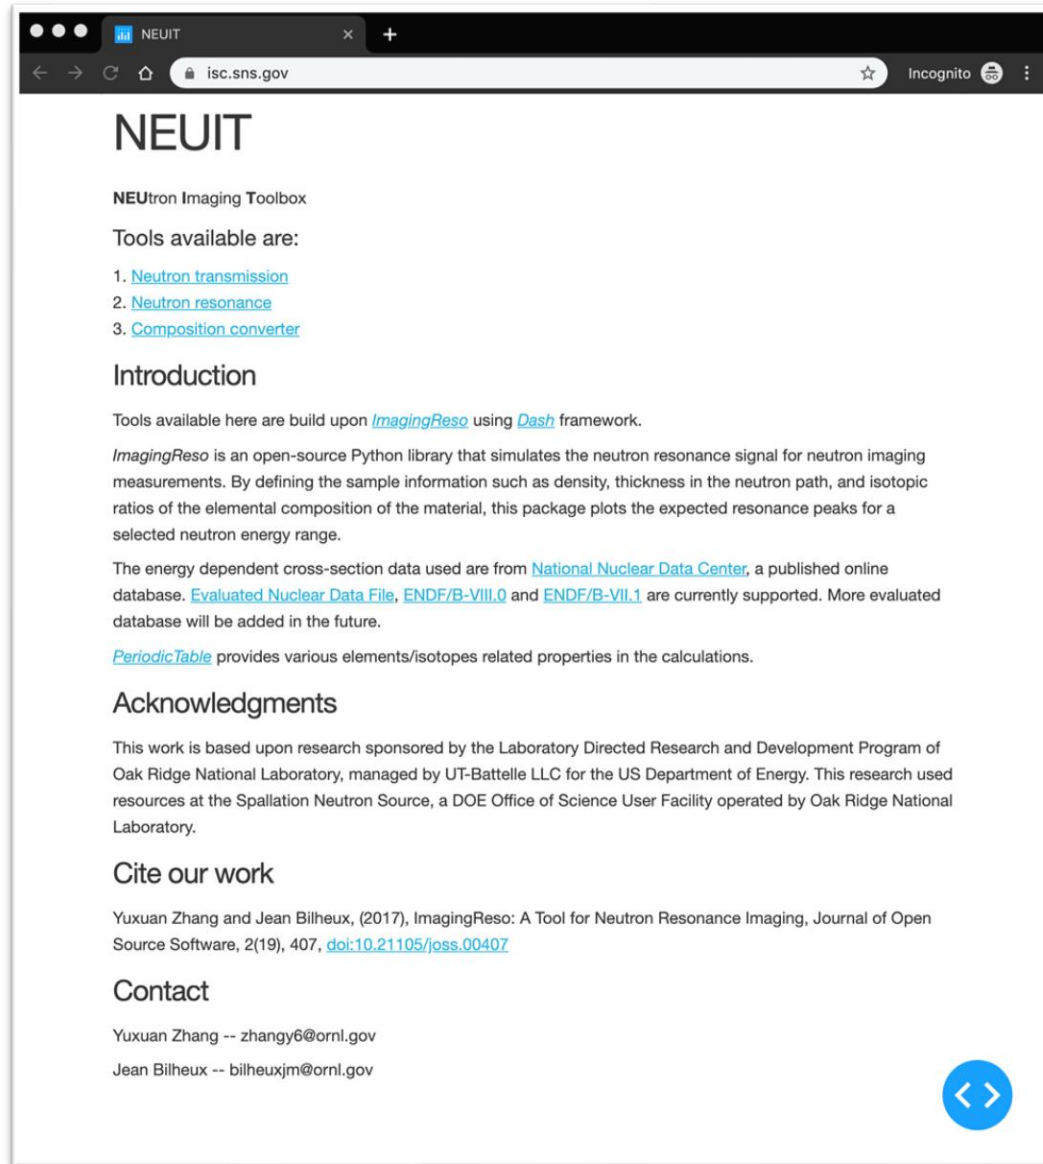

4 x 4 cm<sup>2</sup>, spatial resolution ~ 150 μm, time  
resolution is 150 ns.

# Preparing for an imaging experiment

- Predict overall transmission in your sample (iNEUIT)
- Contact instrument team to optimize your experimental measurements (detector, SNR, sample environment, etc.)
- Contact computational instrument scientist to discuss data processing and analysis requirements (Python Jupyter notebooks)

# Experiment planning tools: *NEUIT* (**NEU**tron **I**maging **T**oolbox)

- Tools available:
  - 1) Neutron transmission  
Compute white-beam transmission
  - 2) Neutron Resonance  
Simulate energy-dependent signal
  - 3) Composition convertor  
Perform wt. %  $\Leftrightarrow$  at. % conversion
- Nuclear database supported
  - ENDF/B-VIII.0 (BNL)
  - ENDF/B-VII.1 (BNL)
- Elemental/isotopic info
  - PeriodicTable 1.5.0 (NIST)

# NEUtron Imaging Toolbox (NEUIT, <https://neuit.sns.gov/> )

For white-beam imaging at CG-1D

# Jupyter Notebooks Demonstration

- Samples: Ni and Cu powders in Al cans measured at SNS BL-03 SNAP
- Goals:
  - Load and normalized data in iBeatles software
  - Plot and Identify Bragg edges
  - Fit Bragg edges
  - Calculate d-spacing

# How to get to analysis server and start iBeatles

- On a web browser, type “analysis.sns.gov”
- Enter username and password
- On analysis server, open a terminal window
- Type: `/SNS/users/j35/bin/start/iBeatles`

# We have a user home page with instructions and tutorials

The screenshot shows a web browser window with the URL `neutronimaging.pages.ornl.gov`. The page features the ORNL Neutron Imaging logo on the left, a search bar, and a navigation menu with the following items: 1. Before your Arrival (checked), 2. Capabilities (checked), 3. Tutorials (checked), 4. Frequently Asked Questions, and 5. Links. Below the menu are links for Photo Gallery, Publications, and Contacts. At the bottom of the menu are language and history options. The main content area is titled "USER HOME PAGE" and includes a welcome message, a list of links for proposal submission, a paragraph about the site's purpose, and a tip box recommending discussion with the instrument team. A "Main features" section lists: Prepare your arrival, Capabilities, How to, and Frequently Asked Questions.

Clear History

## USER HOME PAGE

### Welcome to the ORNL Neutron Imaging Website!

- To learn more about submitting a proposal for beam time, go to [neutrons.ornl.gov/users](https://neutrons.ornl.gov/users).
- To submit your proposal, go to the [proposal system](#).

This site is designed to help you with the preparation of your experiment and subsequent data processing and analysis. If you are not familiar with neutron imaging and may be interested in collaborating with us, visit the publications page to review the science we do.

For industrial applications, please contact [Hassina Bilheux](#)

**Tip**

We recommend that you discuss your experiment with the instrument team as soon as you receive approval of your beam time.

## Main features

- [Prepare your arrival](#): Everything you will need to do before coming to our laboratory.
- [Capabilities](#): list of imaging instruments available.
- [How to](#): short tutorials such as how to access your data, connect to the computers, etc.
- [Frequently Asked Questions](#): answers to the most frequent questions we got from our users.

neutronimaging.pages.ornl.gov

# This week's imaging experiment: time-of-flight neutron grating interferometry

- International collaboration between:
  - Markus Strobl and Matteo Busi, Paul Scherrer Institute, Switzerland
  - Simon Sebold, TUM-FRM-II, Germany
  - ORNL neutron imaging team
- We are measuring the small angle scatter the sample produces when interacting with neutrons:
  - This is called the dark field imaging technique
  - We are using a symmetric grating system (i.e., equidistance between the 3 gratings) because it can accept a broad band of neutrons while keeping good visibility

# This week's imaging experiment: time-of-flight neutron grating interferometry

NEUTRONS
